WHO WE ARE

# Helping your business grow

Sapere are a modern and professional software design and development company based in the North East of England.

We bring over 25 years IT industry experience implementing and managing major software development projects for multinational companies. We pride ourselves on our customer service, our integrity and our fantastic team of software developers who consistently deliver high quality, cost effective business solutions.

Our core aim is to always meet and exceed the requirements and expectations of any business we work alongside.

We are proud to provide world class software consultancy, software design and software development services for business and industry throughout the UK.

WHAT WE DO

## Evolve

Sapere specialise in fully integrated bespoke software solutions across all platforms that deliver **efficiency savings, innovation, value** and a distinct **advantage** to your business.

web based software

WHAT WE DO

---

# Bespoke and individually tailored

We specialise in creating bespoke software applications tailored to individual businesses requirements and needs.

Whether mobile, tablet, web, or desktop based, we can produce robust, easy to use, easy to understand software that will make your business more efficient.

Our software is always designed to work around the needs and processes of the business not the other way around. This is proven to assist the productivity of staff by allowing them to focus on the work they are employed to do, not being hampered by difficult to use and complicated software.

The company ethos is simple, we deliver high quality client focused software solutions that are correct for the client each and every time.

# Modifications and Upgrades

In addition to designing and building bespoke mobile systems we also undertake maintenance and modification of existing systems.

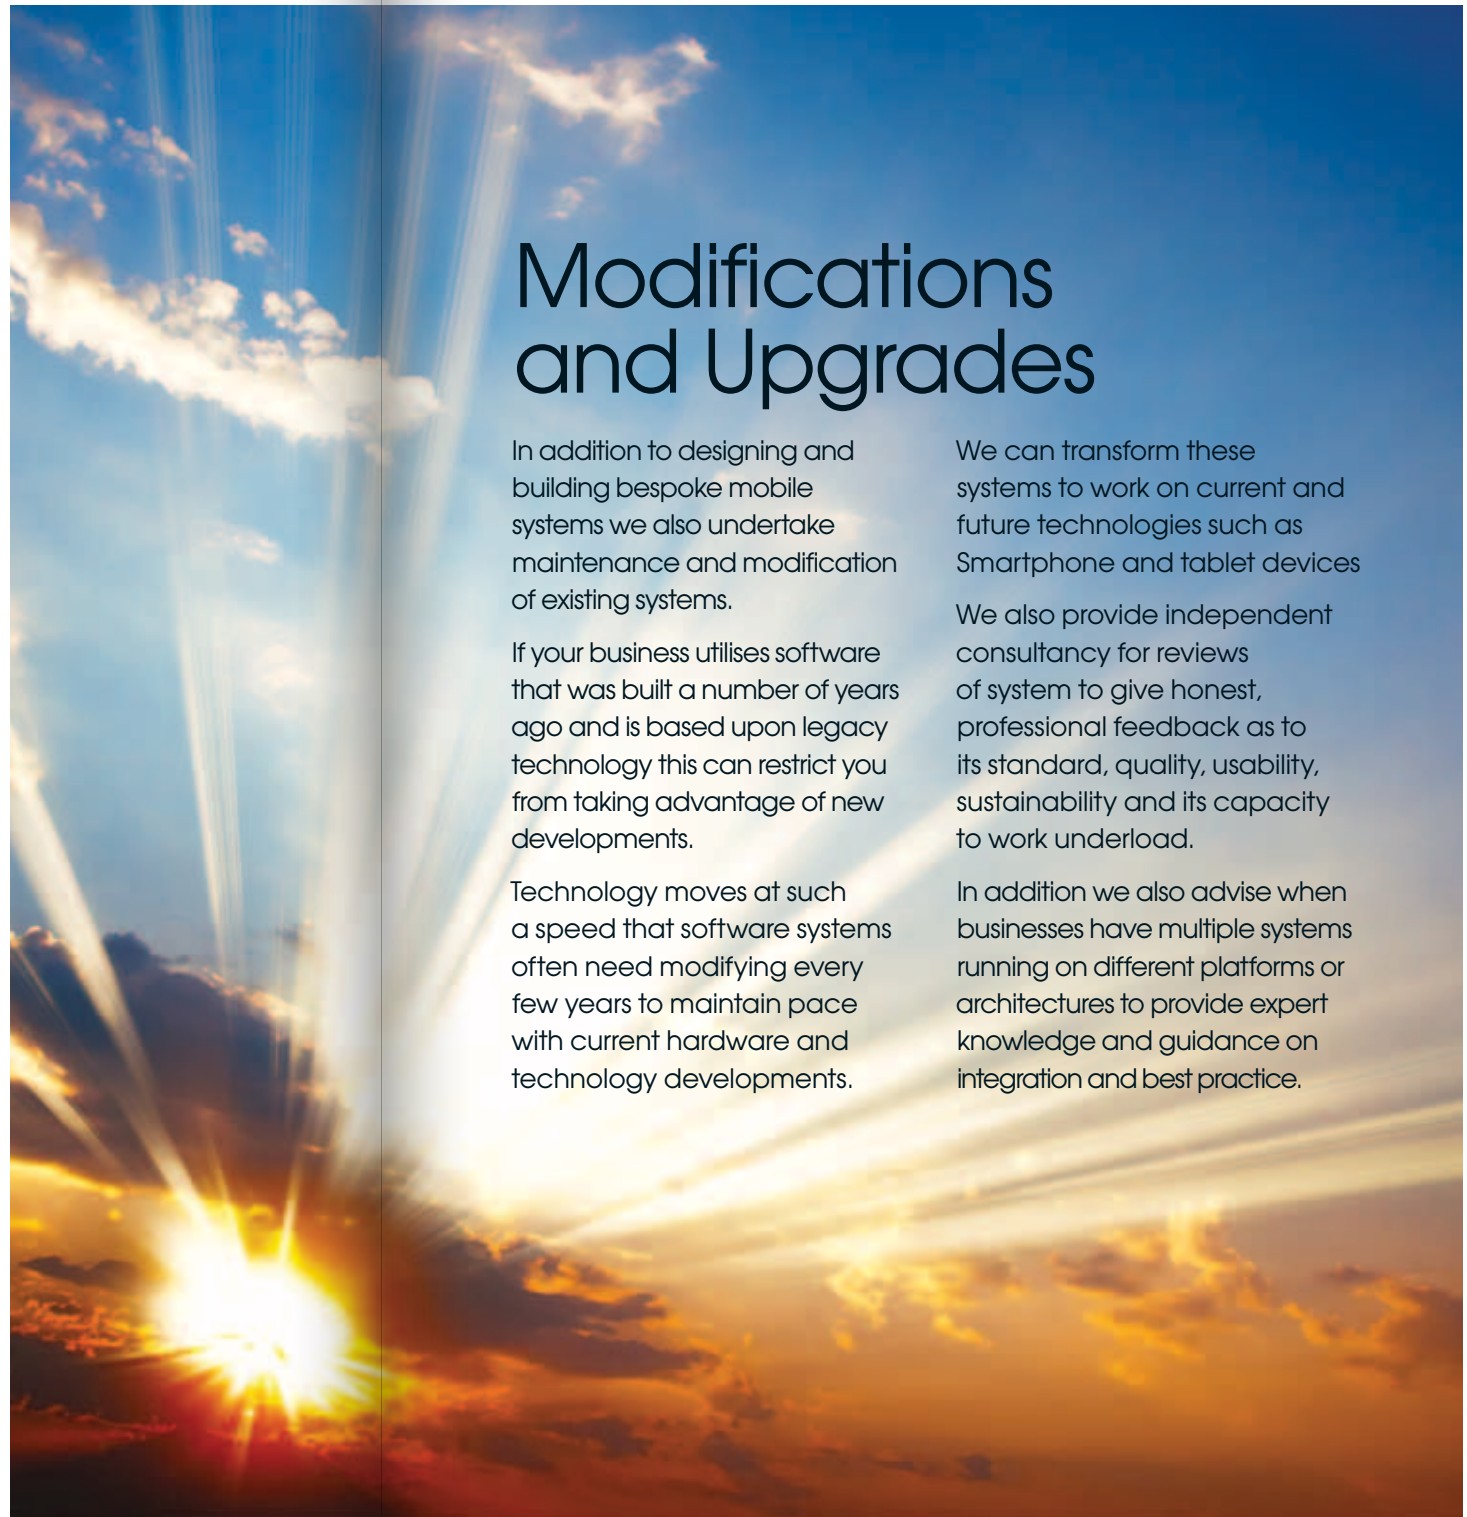

If your business utilises software that was built a number of years ago and is based upon legacy technology this can restrict you from taking advantage of new developments.

Technology moves at such a speed that software systems often need modifying every few years to maintain pace with current hardware and technology developments.

We can transform these systems to work on current and future technologies such as Smartphone and tablet devices

We also provide independent consultancy for reviews of system to give honest, professional feedback as to its standard, quality, usability, sustainability and its capacity to work underload.

In addition we also advise when businesses have multiple systems running on different platforms or architectures to provide expert knowledge and guidance on integration and best practice.

HOW WE DO IT

---

# How we help and advise

The people who know your business the best are you and your staff. We believe to get the best out of any project we need to work closely with you. We pride ourselves on getting to the bottom of any problems and ensure we come up with solutions to make your company run more smoothly and efficiently.

Here's a quick review of the process:

- **Initial consultation** – This involves a representative from Sapere engaging with key members of your staff to discuss the requirements of the proposed project.
- **Proposal document** – supplied by us with recommendations, possible architectures and approximate costs. Following a successful proposal document, we again work alongside your staff to produce a full detailed specification agreement of work to be carried out.
- **Fixed cost quotation** – with timescales.
- **Progress reviews** – ensuring all key dates are achieved.
- **Delivery** – delivered to agreed timelines.
- **Staff training** – with minimal impact on workloads.
